

PRESS RELEASE

SBS Leverages CobolCloud Technology to Support the Cloud Evolution of SBS Banking Platform

Paris, 20 March, 2026 — SBS (part of the 74Software group) announces the integration of CobolCloud technology into the **SBS Banking Platform**, including its **Interest** and **EPE** modules.

The SBS Banking Platform is a modular, cloud-native banking platform covering all key domains of modern banking — from account management and payments to lending, regulatory compliance, and digital services. Designed with an **API-first** architecture, it enables financial institutions to evolve their core banking systems in a progressive and controlled manner, while benefiting from **SBS's** latest cloud offerings.

CobolCloud for Robust and Continuous Evolution

As part of this collaboration, SBS and CobolCloud teams have worked closely to validate the integration of CobolCloud within the **Interest** and **EPE** offerings. CobolCloud technology is now the preferred approach for enabling the execution of existing **COBOL** applications in cloud and hybrid environments, while ensuring **robustness, scalability, and controlled continuity** of critical systems.

COBOL remains a foundational pillar of banking systems, capable of sustaining complex and mission-critical business rules over time. The approach adopted is based on the controlled evolution of existing foundations — **without operational disruption, without rewriting, and without technological lock-in**. This continuous mastery enables the progressive integration of legacy systems with emerging technologies, in line with the evolving needs of financial institutions.

About CobolCloud

With over thirty years of expertise, CobolCloud delivers software and services to help organizations renew their core business systems, offering business independence, flexibility, and longevity.

The CobolCloud Continuous Modernization Platform is a pioneering approach to software evolution. It transforms how organizations engage with their COBOL applications, offering them control and long-term viability for their most critical IT functions.
