

Own your Past - Control your Present - Shape your Future

Storyboard

This short storyboard presentation introduces CobolCloud and our vision for your success

With 30+ years of expertise, CobolCloud delivers software and services to help organizations rethink their COBOL applications, offering business independence, flexibility, and longevity.

500M+

Lines of COBOL
in production

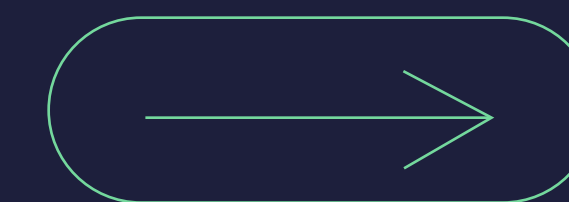

250+

Customer applications
modernized

30+

Years in IT system
evolution

02

**For decades,
COBOL applications
have served
as the digital
backbone of major
institutions**

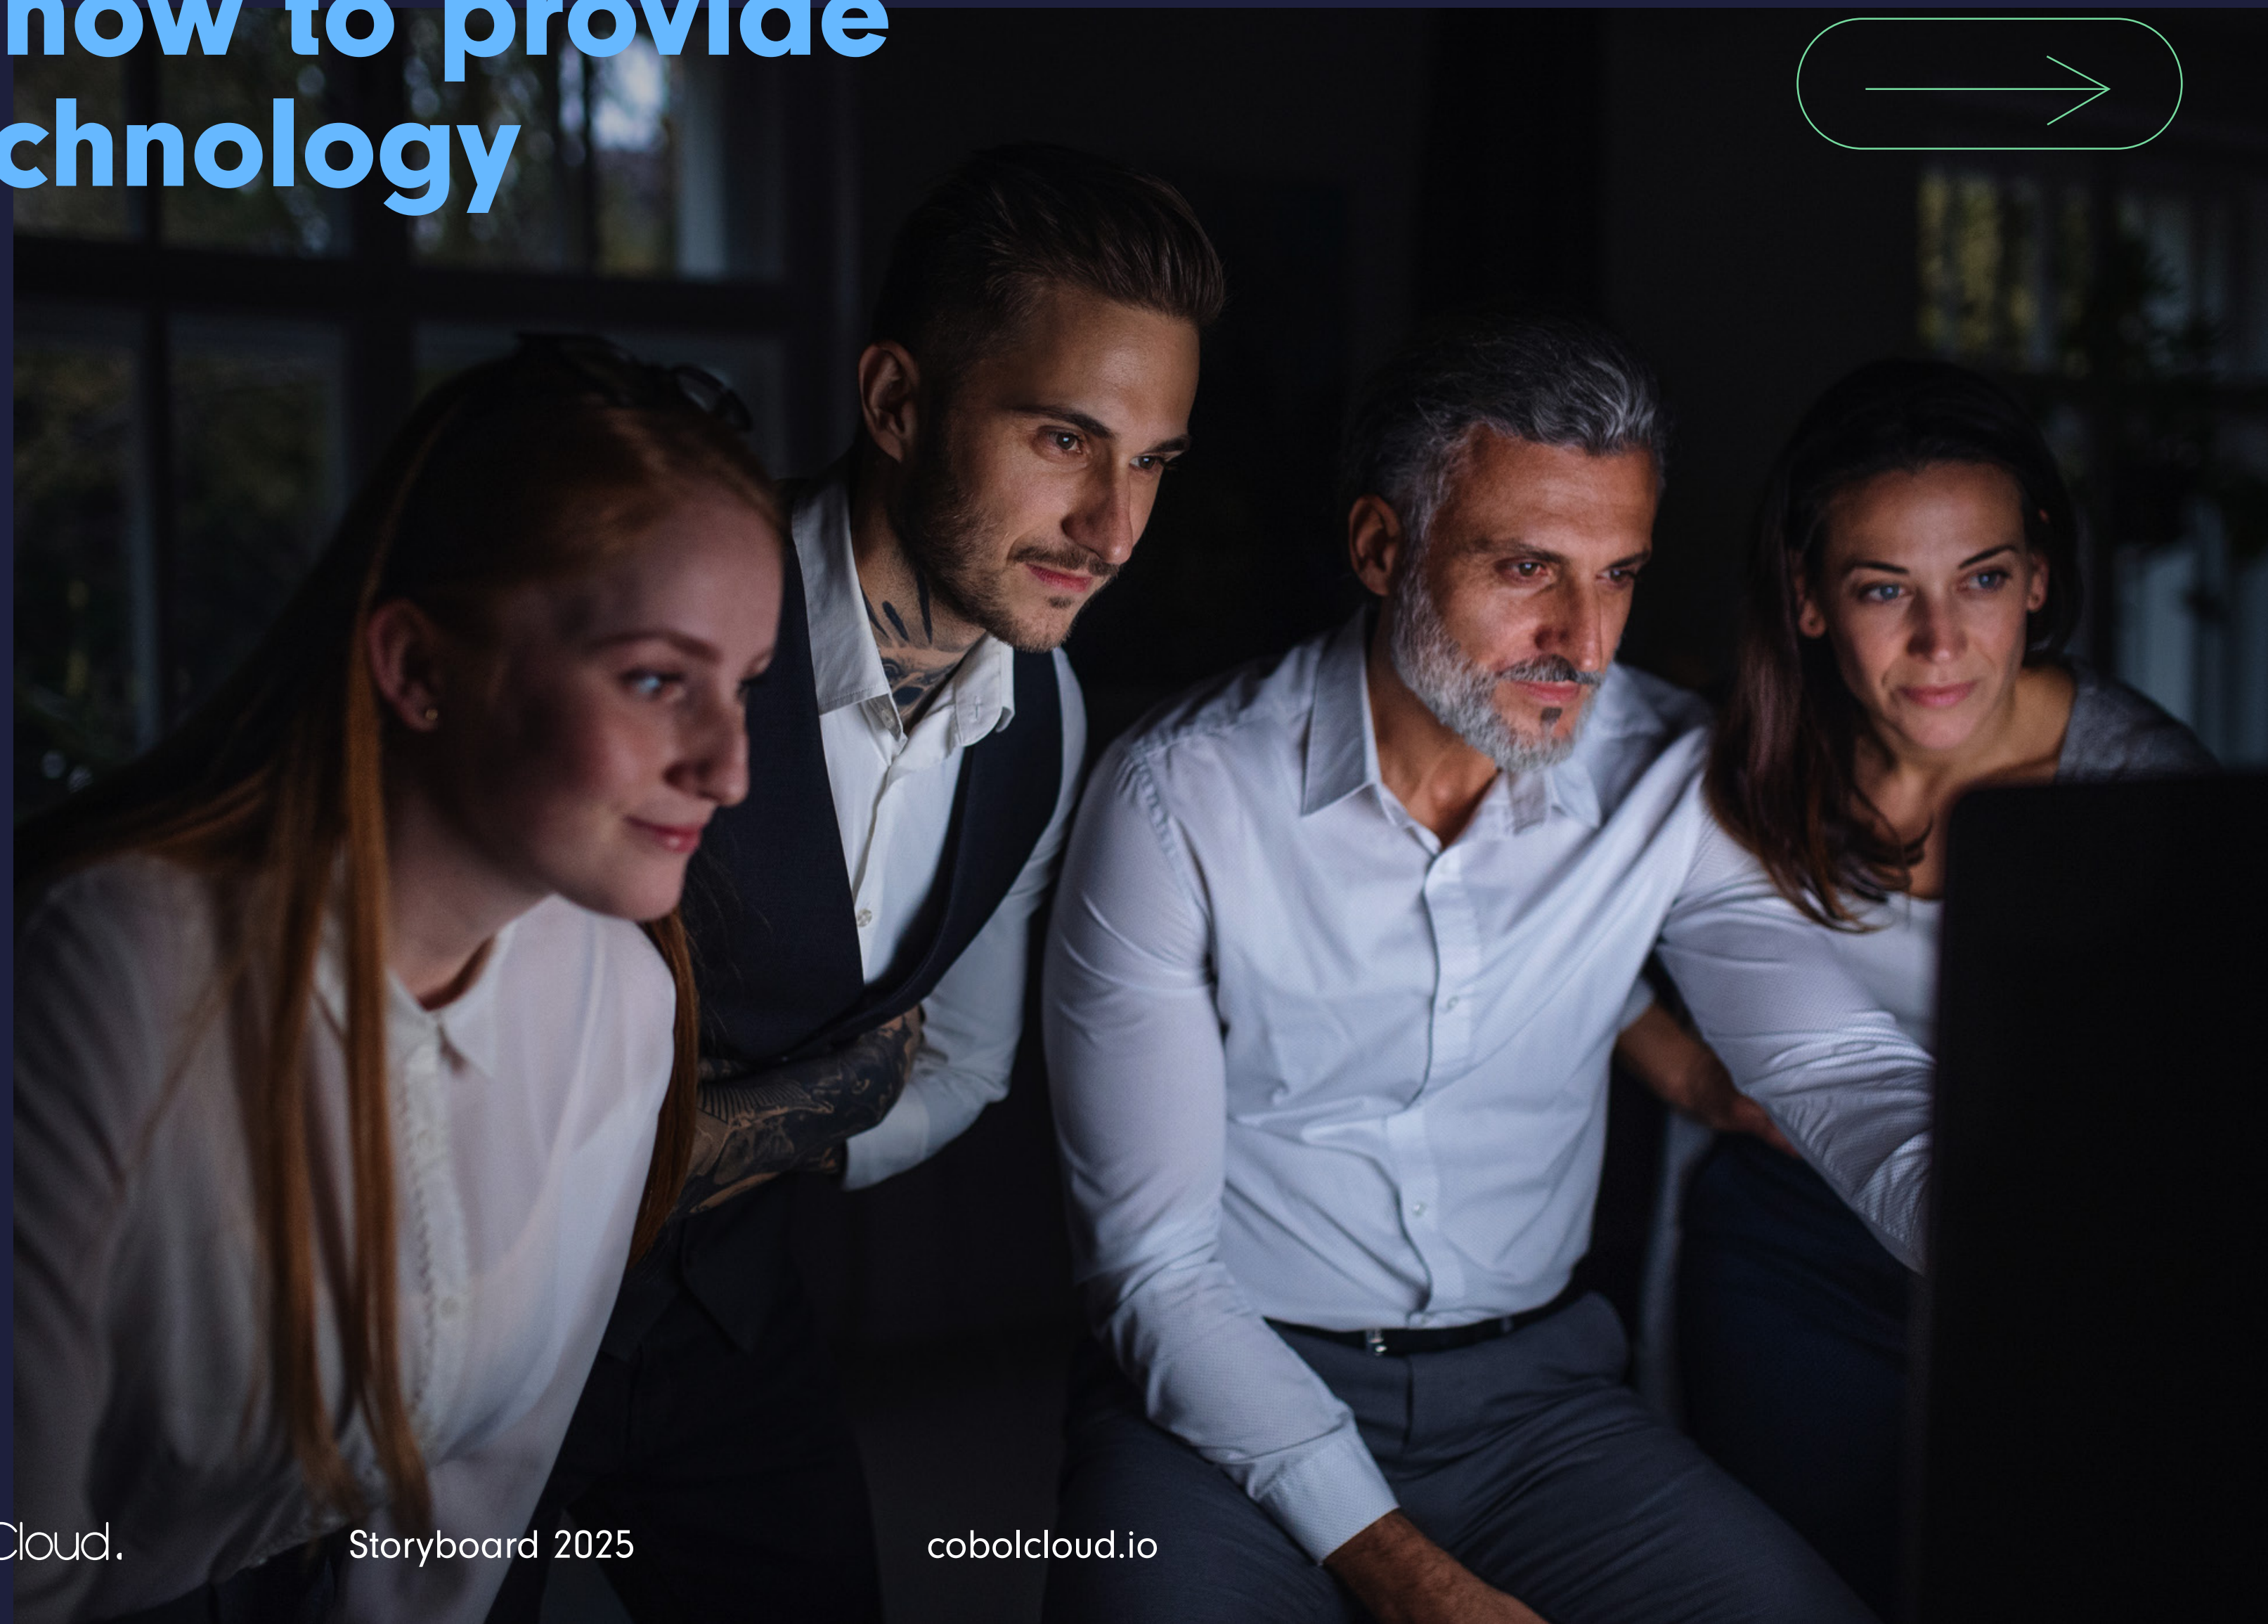

**They model critical business rules
and processes to support revenue generation,
customer satisfaction, and vital operational
tasks for thousands of organizations**

03

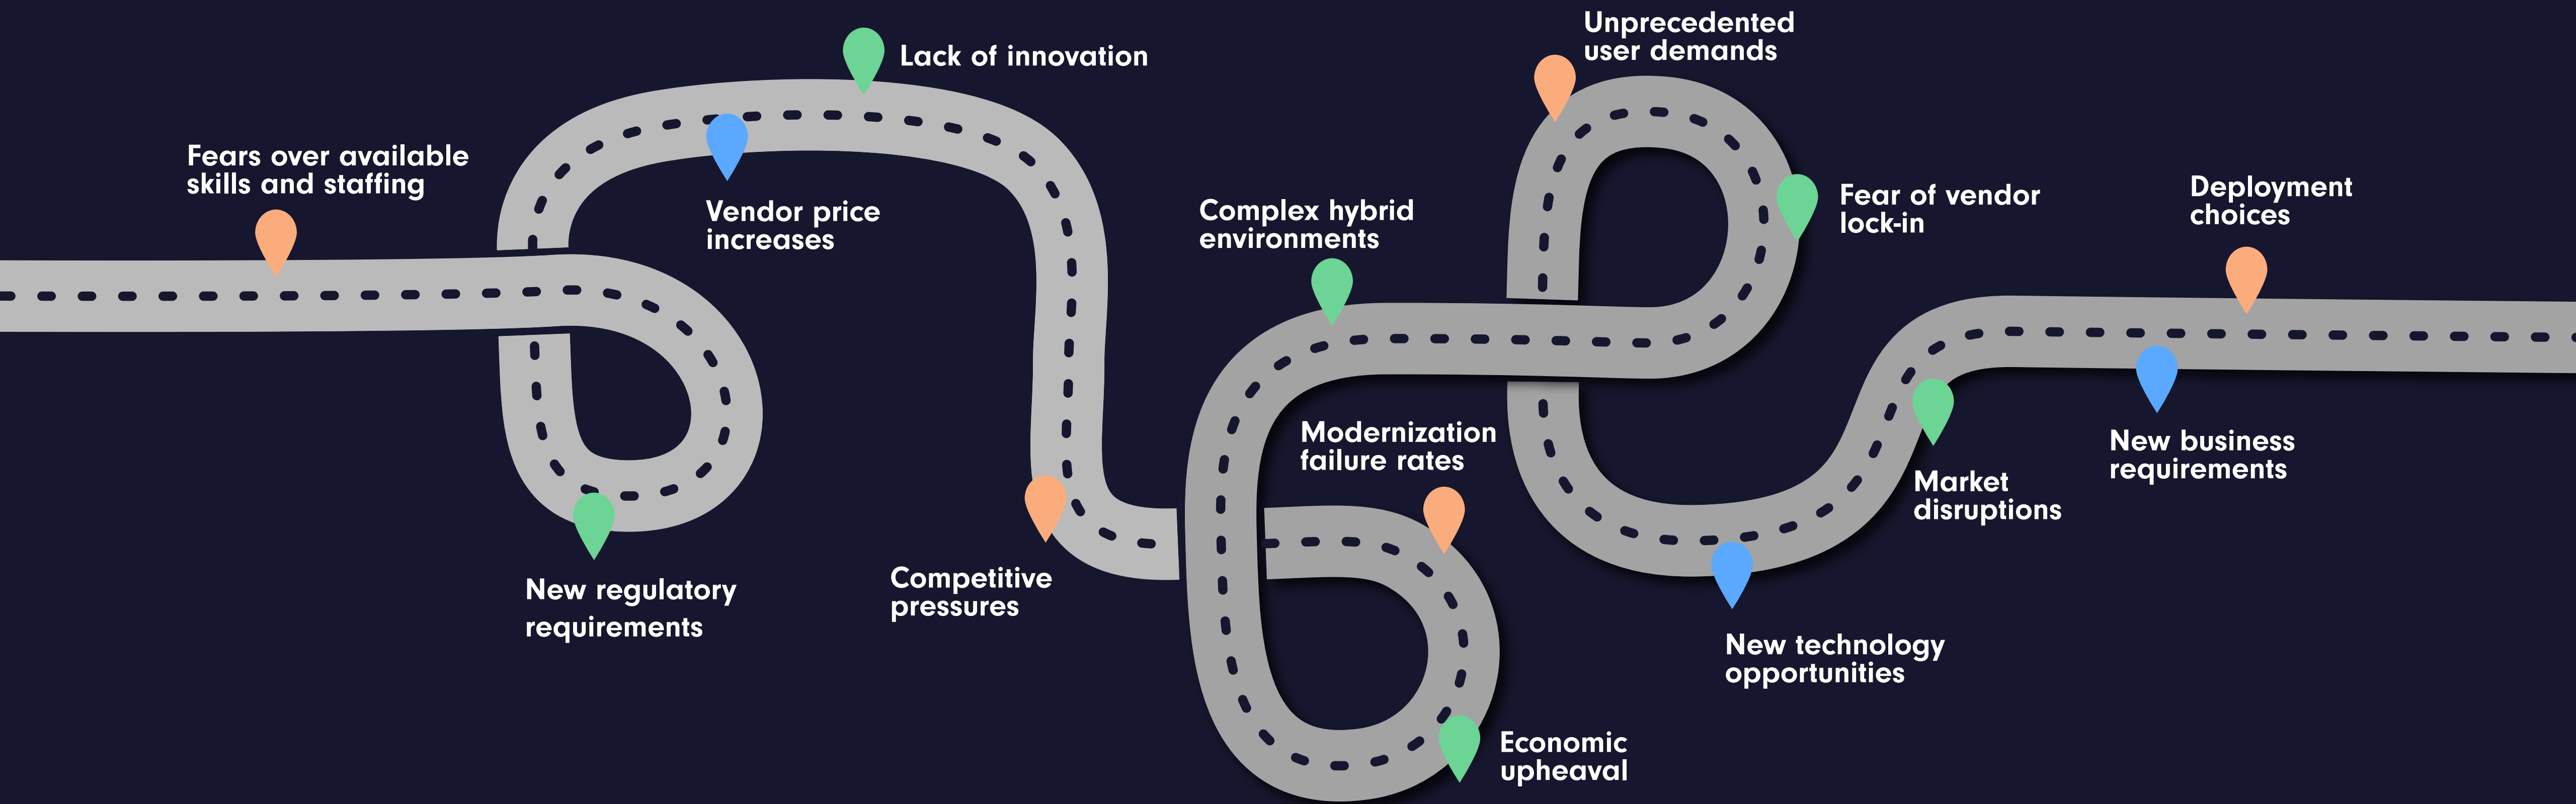

**Those systems were built and updated
by trained IT staff who knew the business,
what it needed, and how to provide
that using reliable technology**

04

But the evolution of IT never ends, and organizations are under constant pressure to improve and innovate – for many reasons

IT leaders are often faced with three common challenges regarding their legacy IT systems

06

800

Billion lines of COBOL code are in production, globally, today. COBOL remains vital – but it is falling behind as a technology and is expensive to maintain

70%

Studies reveal that most application modernization projects do not achieve their goals. Most first-time modernization projects fail outright.

65

The COBOL language is now 65 years old. Declining application expertise and skills in the language are making IT system evolution harder to achieve.

And with greater pressure, comes greater priority

07

**This year, 69% of IT leaders
are increasing their
application modernization
budget**

But traditional approaches to modernization are often disruptive, high-risk strategies

08

**And results often disappoint...
the bulk of modernization
projects fail**

At CobolCloud, we reject draconian, risky forms of legacy modernization

09

Our Continuous Modernization Platform offers a new way to protect, rethink, and regain the profound value of your legacy systems

- Retain and reimagine your legacy
 - the DNA of your enterprise
- Embark on stable IT transitions that respect the past and embrace the future
- Remove unnecessary and expensive 3rd party dependency
- Restore expertise, self-sufficiency, and control

...using a unique three-pillared approach:

MOVE

MASTER

MANAGE

MOVE

Achieve portability without limits

11

Renew and reuse trusted COBOL applications

- Proven, Open-Source software and delivery provide risk-free, innovative application evolution
- Run COBOL across Linux, Cloud, Windows, Containers—without lock-in, and without rewriting
- Remove dependencies on outdated formats, platforms and license models

Remove vendor lock-in and prepare for autonomy

- Operationalize efficient software delivery
- Establish a continuous enterprise scale support model that puts you in the driving seat
- Insulate against acquisitions, technology retirements, with a framework that is resilient, collaborative and proactive

MANAGE

Augment your legacy governance

13

Restore and document lost application knowledge

- Recapture control of software delivery: use AI-driven insight to reengineer, document and enrich trusted legacy COBOL code
- Leverage GPS-level accuracy to understand the business processes buried in the code
- Restore legacy as an asset, not a liability

Why now?

- Support is fading for older technology
- Skills are becoming scarce
- Incumbent vendors are no longer investing

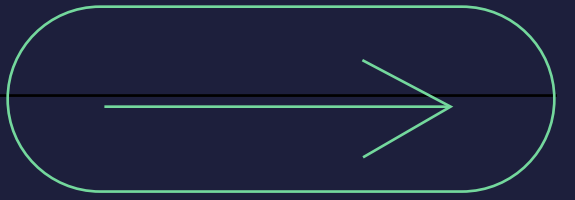

- Yet IT is being asked to do more and more—with less
- Traditional approaches are failing
- IT leaders are at breaking point

It's time to act - and we are with you all the way.

You do not have to choose between stagnation or demolition

15

MOVE

your legacy forward with freedom

MASTER

your systems with purpose

MANAGE

them with intelligence

Rethink COBOL - a foundation for future success, not a problem to eliminate

Move with Freedom. Master with Purpose. Manage with Intelligence.
